**Statistics for Food Scientists: Making Sense of the Numbers** Frank Rossi, Victor Mirtchev

The practical approaches championed in this book have led to increasing the quality of many successful products through providing a better understanding of consumer needs, current product and process performance and a desired future state. In 2009, Frank Rossi and Viktor Mirtchev brought their practical statistical thinking forward and created the course “Statistics for Food Scientists”. The intent of the course was to help product and process developers increase the probability of their project’s success through the incorporation of practical statistical thinking in their challenges. The course has since grown and has become the basis of this book.

- Presents detailed descriptions of statistical concepts and commonly used statistical tools to better analyze data and interpret results
- Demonstrates thorough examples and specific practical problems of what food scientists face in their work and how the tools of statistics can help them to make more informed decisions
- Provides information to show how statistical tools are applied to improve research results, enhance product quality, and promote overall product development
