Semi-Supervised Learning and Domain Adaptation in Natural Language Processing (Synthesis Lectures on Human Language Technologies)

Anders Sogaard

Semi-Supervised Learning and Domain Adaptation in Natural Language Processing (Synthesis Lectures on Human Language Technologies) Anders Sogaard

This book introduces basic supervised learning algorithms applicable to natural language processing (NLP) and shows how the performance of these algorithms can often be improved by exploiting the marginal distribution of large amounts of unlabeled data. One reason for that is data sparsity, i.e., the limited amounts of data we have available in NLP. However, in most real-world NLP applications our labeled data is also heavily biased. This book introduces extensions of supervised learning algorithms to cope with data sparsity and different kinds of sampling bias. This book is intended to be both readable by first-year students and interesting to the expert audience. My intention was to introduce what is necessary to appreciate the major challenges we face in contemporary NLP related to data sparsity and sampling bias, without wasting too much time on details about supervised learning algorithms or particular NLP applications. I use text classification, part-of-speech tagging, and dependency parsing as running examples, and limit myself to a small set of cardinal learning algorithms. I have worried less about theoretical guarantees ("this algorithm never does too badly") than about useful rules of thumb ("in this case this algorithm may perform really well"). In NLP, data is so noisy, biased, and non-stationary that few theoretical guarantees can be established and we are typically left with our gut feelings and a catalogue of crazy ideas. I hope this book will provide its readers with both. Throughout the book we include snippets of Python code and empirical evaluations, when relevant. Table of Contents: Introduction / Supervised and Unsupervised Prediction / Semi-Supervised Learning / Learning under Bias / Learning under Unknown Bias / Evaluating under Bias

From reader reviews:

Ebony Lower:

Nowadays reading books are more than want or need but also get a life style. This reading behavior give you lot of advantages. The advantages you got of course the knowledge the particular information inside the book this improve your knowledge and information. The details you get based on what kind of publication you read, if you want have more knowledge just go with schooling books but if you want feel happy read one together with theme for entertaining for instance comic or novel. Typically the Semi-Supervised Learning and Domain Adaptation in Natural Language Processing (Synthesis Lectures on Human Language Technologies) is kind of e-book which is giving the reader unpredictable experience.

Frankie Graybill:

Reading a guide tends to be new life style on this era globalization. With examining you can get a lot of information that could give you benefit in your life. Having book everyone in this world can share their idea. Guides can also inspire a lot of people. A lot of author can inspire their very own reader with their story or perhaps their experience. Not only the storyplot that share in the publications. But also they write about the knowledge about something that you need example of this. How to get the good score toefl, or how to teach your sons or daughters, there are many kinds of book that exist now. The authors in this world always try to improve their talent in writing, they also doing some analysis before they write to their book. One of them is this Semi-Supervised Learning and Domain Adaptation in Natural Language Processing (Synthesis Lectures on Human Language Technologies).

Charles Dame:

Your reading 6th sense will not betray a person, why because this Semi-Supervised Learning and Domain Adaptation in Natural Language Processing (Synthesis Lectures on Human Language Technologies) book written by well-known writer whose to say well how to make book which might be understand by anyone who have read the book. Written within good manner for you, leaking every ideas and producing skill only for eliminate your own personal hunger then you still hesitation Semi-Supervised Learning and Domain Adaptation in Natural Language Processing (Synthesis Lectures on Human Language Technologies) as good book not only by the cover but also from the content. This is one reserve that can break don't assess book by its protect, so do you still needing one more sixth sense to pick this particular!? Oh come on your studying sixth sense already alerted you so why you have to listening to a different sixth sense.

Mary Richie:

Beside this Semi-Supervised Learning and Domain Adaptation in Natural Language Processing (Synthesis Lectures on Human Language Technologies) in your phone, it can give you a way to get more close to the new knowledge or information. The information and the knowledge you can got here is fresh from your oven so don't be worry if you feel like an aged people live in narrow town. It is good thing to have Semi-

Supervised Learning and Domain Adaptation in Natural Language Processing (Synthesis Lectures on Human Language Technologies) because this book offers to you personally readable information. Do you sometimes have book but you rarely get what it's all about. Oh come on, that wil happen if you have this in your hand. The Enjoyable agreement here cannot be questionable, just like treasuring beautiful island. Use you still want to miss the item? Find this book and also read it from at this point!
